

Top Climate Policies in 2025

Carbon Border Adjustment Mechanism (CBAM)

The CBAM is a carbon pricing system for imports into the European Union. It targets carbon-intensive industries like steel, cement, and aluminum. The goal is to prevent carbon leakage and encourage cleaner production globally.

Global Methane Pledge

This policy involves over 100 countries committed to reducing methane emissions by at least 30% by 2030, relative to 2020 levels. It addresses emissions from agriculture, fossil fuels, and waste management.

Just Energy Transition Partnerships (JETPs)

JETPs are financial packages offered to developing countries to help them transition from coal to clean energy. They combine grants, loans, and investments from public and private sources.

Article 6 Carbon Markets (Paris Agreement)

Article 6 of the Paris Agreement facilitates international cooperation through carbon markets. It enables countries to trade emission reductions to meet their climate targets more cost-effectively.
